Warning: Read this Instructions Tab thoroughly and entirely. For your application to be deemed complete, you must provide all required information as outlined below and on all subsequent tabs.

This application is specific to Urban Indoor and Urban Irrigation water conservation project types. If your project focuses on improving water use efficiency in an Agriculture or Nursery setting, you are currently using the wrong application. Go back to the Cooperative Funding Program webpage and download the appropriate application (and example application) for your project.

There are EIGHT tabs (listed to the right), SEVEN of which require data input from you.

Enter data in each light blue colored cell --> Some cells contain drop down menus --> Clicking on these cells will reveal the menu choices

Gray cells will self calculate. They cannot accept user inputs.

\$2.21

Tabs

1. Entity Information
2. Project Description
3. Project Financing
4. Project Budget
5a. Estimated Water Savings - Indoor & Other
5b. Estimated Water Savings - Irrigation
6. Cost-Effectiveness Calculator
7. Ancillary Information

Please be as BRIEF as possible while still being informative. Note that some narrative answer fields are limited to the requested length and space provided. If we cannot see it, we cannot read it. It is recommended that you prepare your narrative text in Word and then copy/paste into the spaces provided.

Excel Tip: You can begin a new paragraph within a cell by holding down the Alt key and hitting Enter (return).

You must show the calculations leading to your project's estimated water savings. This is done on Tab 5a (Estimated Water Savings - Indoor) and/or Tab 5b (Estimated Water Savings - Irrigation). Once completed, you must fill out Tab 6 (Cost-Effectiveness Calculator). If you have difficulty using the calculator, you may contact Robert Wanvestraut at rowanves@sfwmd.gov or 561-682-6615, or Stacey Adams at sadams@sfwmd.gov or 561-682-2577.

On each tab, start at the top and work to the bottom until you reach the following message:

1. Entity Information

Applicant Entity Name	Project Name	County	Planning Region	Project Location - Latitude of Project (Decimal Degrees)	Project Location - Longitude of Project (Decimal Degrees)	
The Wonderful SoFla Village	Irrigation System Retrofit	Lemon	LEC	-45.54546873	25.64654635	
Authorized Representative FIRST Name	Authorized Representative LAST Name	Authorized Representative Email Address	Street Address	City	Zip Code	Phone Number
Jane	Richards	jrichards@buwww.org	14 Nowhere Ave	Lemonville	55555	555-555-5555

If the Authorized Representative is different from the Project Manager (Primary Contact), please provide the following information for the Project Manager.

Project Manager FIRST Name	Project Manager LAST Name	Project Manager Email Address	Street Address	City Zip Code		Phone Number
Sam	Gamgee	sgamgee@buwww.org	28 Somewhere Ave	Lemonville	55555	999-999-9999

	Federal ID Number	Type of Organization/Entity	If applicable, provide the Consumptive Use Permit, etc.
ı	2842145	HOA/POA	28-45456

If the applicant is a local government (City/County, etc.) has it adopted an irrigation ordinance that comports with the District's Year-Round Irrigation Rule?	Not Applicable
If applicable, provide the Irrigation Ordinance number	N/A
Do you understand that if the irrigation ordinance above does not comport with the District's Year-Round Irrigation Rule, the application will be deemed ineligible for funding?	Not Applicable

2. Project Description

Anticipated Start Date	Anticipated End Date	Is this a multi-year project?	Project Type	Estimated Water Savings (mgy)	\$/kgal	Total Project Cost	Requested Funding
10/1/2021	9/30/2022	No	Urban Irrigation	5.1	\$1.02	\$ 23,915.10	\$ 11,958.00

The gray cells above will auto-populate as you provide inputs elsewhere within this application.

Excel Tip: You can begin a new paragraph within a cell by holding down the Alt key and hitting Enter (return).

Project Description Short Form (Limit to THREE sentences or less)	The Village currently irrigates 8 acres of landscape with an inefficient irrigation system using mechanical timer-based controllers. This project will include the following: the replacement of approximately 268 pray heads with pressure regulation and SAM check valves and include approximately 268 U series water nozzles and 85 pressure regulation rotors; the deployment of 9 EPA WaterSense labeled SMART weather-based irrigation controllers with 21 expansion modules; 32 soil moisture sensors and 9 index to solenoid valve conversions.
Project Objective (Limit to ONE sentence)	The objective of this project is to improve irrigation water use efficiency on 8 acres of irrigation landscaping using the latest irrigation water conservation technology.
Long-Form Project Description (Scope of the Project)	The Wonderful Sofia Village (Village) currently irrigates 8 acres of landscape with an inefficient irrigation system using mechanical timer-based controllers. The Village contracted with a licensed and Irrigation Association Certified irrigation system auditor to identify areas of water loss and to provide recommendations for system efficiency improvements. The auditor identified 26 leaks which have since been repaired. In addition to the leaks, the system currently irrigates many areas with mixed vegetation types (lawn areas and shrubs or annuals). Many zones have a mixture of spray heads and rotors. The Village wishes to rectify the mixed zones and upgrade its current irrigation equipment with the latest water conservation technology.
Include: Item(s) to be purchased/installed/distributed and quantities of each	This project will cover all 8 irrigated acres and include the following actions: the replacement of approximately 268 spray heads with pressure regulation and SAM check valves and include approximately 268 U series water nozzles and 85 pressure regulation rotors (which will eliminate misting and overspray); the deployment of 9 EPA WaterSense labeled SMART weather-based irrigation controllers; and 9 index to solenoid valve conversions (necessary for the SMART controller operations). Thirty-two (32) soil moisture sensors will support these controllers. The addition of 21 expansion modules will allow us to split zones efficiently to minimize the water times for specific zones.
	The Village will contract with a licensed and Irrigation Association Certified contractor who will conduct the system upgrades and educate the Village's maintenance staff members on maintenance of the new equipment to assure a high functional irrigation system for all common area lawns.

Location	Wonderful SoFla Village
Target Group(s) and Size	8 acres of irrigated landscape
Acres Affected (if this is an irrigation project)	8

Is this a rebate or voucher program?	Not Applicable
If yes, complete the following:	
a. How many rebates or vouchers in total will be issued within the funding period ¹ ?	
b. What is the maximum number of rebates/vouchers issued to a single participant?	
c. How many dwelling units/facilities will this program attempt to reach <u>at a minimum</u> during the funding period ^{2, 3} ? This should be equal to a./b. above.	
period : This should be equal to a., b. above.	
d. List any additional types of fixtures or devices, such as, but not limited to, a showerhead or faucet aerator	
that a participant may receive.	

 $^{1}\mbox{Do}$ not enter a range. The final reimbursement will be tied to this number.

 2 This question assumes all participants accept the maximum number of allowable rebates/vouchers. 3 This is the figure you must use in the calculation in your estimated water savings.

Identify the water source that will be conserved.	Utility Water Provider or Water Source
Potable water from a utility at risk for saltwater intrusion based on elevated chloride levels in monitoring wells or within a Restricted Allocation Area (Section 3.2.1 of the Applicant's Handbook for Water Use Permit Applications)	
Potable water from a utility not at risk for saltwater intrusion or in a Restricted Allocation Area	
Potable water, but not sure if the area is with a Restriction Allocation Area or at risk of saltwater intrusion (Specify the provider utility)	Yes -BU-WWW
Surficial well water in the service area of a utility at risk for saltwater intrusion based on elevated chloride levels in monitoring wells	
Surficial well water in the service area of a utility not at risk for saltwater intrusion	
Surficial well water, but unsure if at risk of saltwater intrusion (Specify the water body)	
Water from a canal or stormwater catchment area (such as a man-made lake within a housing development)	
Reclaimed water	
Other (Specify)	

EXAMPLE

3. Project Financing

Total Project Cost (\$)		Funding Requested (\$)		F	Applicant Match (\$)	Third-Party Match (\$)	
\$	23,915.10	\$	11,958.00	\$	9,800.00	\$	2,158.00

Has this project received	No							
If yes, fill out the table be	If yes, fill out the table below:							
Year Awarded	Contract Number	Amount Awarded	Amount Spent					

Is the applicant receiving other funds for this project?		Yes
If yes, federal/state/private entity name(s):	If	yes, amount(s):
Bozos Conservation Fund	\$	2,158.00

5a. Estimated Water Savings

This tab contains two sections.

The first section, "Estimated Water Savings for Common Indoor Efficiency Measures", has been created and preset for the most common indoor retrofit project types. You must use the default Current Use and Efficient Use rates for the items below unless you provide an explanation (and documentation) supporting your deviation from the defaults. Acceptance of deviated values is pending District staff review.

The second section, "Estimated Water Savings Explanation for Other Conservation Project Types", has been created for water use efficiency improvement projects using hardware in addition to, or instead of, the fixtures and appliances in Section 1.

Section 1. Estimated Water Savings for Common Indoor Efficiency Measures

Persons Per Home Number of homes/units affected by this project

2.64

If unknown for your area, visit U.S. Census Quick Facts for your county, or use Florida default of 2.64.

			_
		Standard	1
	Common	Efficiency Use	
	Current Rates	Rates	
Residential Toilet	3.5	1.28	gal./flush
Shower	2.5	1.75	gal./min.
Lavatory Faucet	2.2	1.50	gal./min.
Kitchen Faucet	2.2	1.50	gal./min.
Dishwasher	10.5	3.50	gal./use
Clothes Washer	23.0	15.00	gal./use
Pre-Rinse Spray Valve	2.5	1.28	gal./min.
Commercial Toilet	3.5	1.28	gal./flush
Commercial Lay Faucet	2.2	0.50	gal /min

USER IN			
	Current Use (Before)	Efficient Use (After)	
Residential Toilet	0.0	0.00	gal./flush
Shower	0.0	0.00	gal./min.
Lavatory Faucet	0.0	0.00	gal./min.
Kitchen Faucet	0.0	0.00	gal./min.
Dishwasher	0.0	0.00	gal./use
Clothes Washer	0.0	0.00	gal./use
Pre-Rinse Spray Valve	0.0	0.00	gal./min.
Commercial Toilet	0.0	0.00	gal./flush
Commercial Lav. Faucet	0.0	0.00	gal./min.

^{*}Standard uses per day and service lives applied.

Savings in million gallons per	0.0
year	0.0

Section 2. Estimated Water Savings Explanation for Other Conservation Project Types

Please enter the following:

Current Water Use	0.0	mg
Estimated Post-project Water Use	0.0	mg
Potential Savings	0.0	mg

Griefly provide the basis for your Current Water Use estimate (e.g., metered data, water bills, zone use calculations).				

Briefly explain the basis for your Post-project Water Use estimate.	

5a. Estimated Water Savings - Irrigation

For these items, you must use the savings rates provided.

Please enter the following:

Project Size	8.0	acres affected
Current Water Use	16.9	mgy
Savings %	30%	From table at right
Potential Savings	5.1	mgy

Enter this value in Column D on the Cost-Effectiveness sheet.

Read the notes below the input box.

If your project entails any of these items, you must use the savings % shown below.

Item	Savings %
Rain Sensor	30%
Soil Moisture Sensor	30%
Weather-based Controller	30%
Efficient Sprinkler Heads	15%
System Design Corrections	15%
Turf Replacement*	30% - 100%

^{*} Rebate eligible species must be listed. Savings % will be a function of plant species needs.

Briefly provide the basis for your Current Water Use estimate (e.g., metered data, water bills, zone use calculations). Also see the notes below this box.

-->

Currently the water used for irrigation per week (3 x's weekly @ 1/2") would use 40,731 gallons per week, per acre, X's 52 weeks per year = 2,118,012 x 8 acres = 16,944,096 gallons per year. The project would yield approximately a 30% savings with and estimated 5.1 MGY.

Savings for projects with more than one component (from the table above) cannot double-count or compound savings percentages.

For projects with more than one component, use ONLY the savings associated with the highest savings percentage.

As an example, if the upgraded system will have new efficient sprinkler heads and a new controller, only enter percent savings for the new controller (30%).

District staff may assign a higher evaluation score for projects with more than one component.

For items not shown in the savings table above, provide an explanation and any documentation supporting the savings values and number of service years you enter.

6. Cost-Effectiveness Calculator

Total Cost per item MUST match costs presented in Tab 4 (Project Budget).

Service Lives entered in this table MUST come from one of the THREE tables (below) if project items are included in one of those tables. You MUST use the shortest service life if your project includes more than one item on the list.

Administrative or Other In-Kind Service Costs get embedded into the cost of the largest (most costly) item. Refer back to Tab 4 (Project Budget).

Conservation Items	Total Cost Per Line	Annual Estimated Savings (mgy) From Est. Wat. Save Tab	Service Life	Total Project Gallons Saved per Day	Total Gallons Saved over Service Life (MG)	Cost Effectiveness (\$/kgal)
Spray heads, rotors, valves, smart controllers	\$ 23,915.10	5.08	5	13,918	25.40	\$1.02
				-	-	\$0.00
				-	-	\$0.00
				-	-	\$0.00
				-	-	\$0.00
				-	-	\$0.00
				-	-	\$0.00
				-	-	\$0.00
				-	-	\$0.00
	\$ 23,915.10	5.08				\$1.02

(Weighted cost effectiveness for all Items)

Residential Indoor Measures	Service Life (Residential), in years
Tank-type High-efficiency Toilet	25
Efficient Sprinkler Heads	5
High-efficiency Aerator	8

7. Ancillary Information

Does any contractor or other affiliate of the applicant have a financial interest in this project, the property associated with this project, or with any party that may profit financially from this project?	No
If yes, list the parties and interests:	
Is the project part of your institution/facility's conservation plan?	No
This is a State of Florida reimbursement program. The entire project scope is expected to be completed within the funding period, regardless of amount awarded. There is no guarantee the applicant will be awarded the amount requested. Are budgeted funds available to pay for the entire scope of the project?	Yes
Does the applicant understand that if, for any reason, the project scope is not fulfilled to 100% completion as outlined in the statement of work, the funding amount will be reduced to match the original percentage of funding in the contract/purchase order based on the estimated project cost provided in the application?	Yes
Does the applicant understand that funds are only for expenses incurred or obligated during the funding period?	Yes
Is the applicant a REDI Community?	No
Is the applicant willing to host educational/demonstration activities highlighting the project site at reasonable times and under reasonable conditions? Your answer will not affect your project's eligibility or review.	Yes

You have reached the end of the application.

Go back and check that all required information has been entered.

It is recommended you review all inputs on all tabs.
